

We can Supply all you need for your online needs.

We can supply first rate hosting in the UK, at the London Hosting Centre.

Our hosting package is the most generous package on offer today. If you can find a better package cheaper than ours, then we'll double the webspace.

We offer 1 MILLION GB of webspace and 1 MILLION GB of bandwidth every month. If you feel you would need more, then please ask and we can increase the amounts.

For smaller amounts please ask and we will work out a package that is individually tailored to your requirements

our package is

1 MILLION GB UK UNIX Web Space

We offer generous web space allowances giving you plenty of high quality space to develop your site.

1 Million GB Multi Homed Premium BGP4 Bandwidth

Our bandwidth is of the highest quality and is supplied by multiple top UK providers including Level 3, Newnet and Linx.

Host Single Site

With this account you can host a single web site although this web site can have many domains but they all point to the same site.

Unlimited POP3 Mailboxes

Mailboxes allow you to send/receive e-mail on your server via your e-mail software and using our web based e-mail.

Unlimited Multi Recipient E-mail Redirects

Redirects enable you to have e-mail for one address sent to one or many e-mail addresses on or off the server and are very useful if you have off server e-mail accounts or need one address to send mail to many people

Unlimited Autoresponders

Autoresponders are e-mail an address which automatically replies when an e-mail is sent to it with a message of your choice.

Unlimited Mailing Lists

Mailing list are a way of sending an e-mail out to multiple recipients by just sending a single e-mail to just one address. This can enable you to set up newsletters to keep people informed of what is happening with your web site etc...

Web Based E-mail

Web mail is available for all mailboxes on our system, so wherever you are you can always check your e-mail.

FTP Access

FTP access is provided to allow easy upload of your site on to your server.

SSH Access

SSH access is provided for script development and advanced administration of your account.

Web Statistics

Web statistics allow you to monitor the traffic information for all your domains. Using the multiple analysis tools available, you can see how, when, where your sites are being used and where visitors have come from and much more.

Regular Backups Of Data

All our servers are backed up every night to ensure data is secure and safe, so in the very unlikely event of a problem your data can be quickly restored.

Password Protected Directories (.htaccess)

Password protected directories are a very useful tool if you are creating a web site and wish to have private area. This could be a member's section or a place where you can store things you need to keep private from others.

High speed connection to main Internet backbone

Our connectivity is provided by a number of leading UK providers. We use BGP routing to enable us to use all our connections to get maximum performance. This also gives us 100% uptime as even if one of our lines fails there are at least two others which takeover instantly.

99.99% Up-Time

One of the best SLA offered in the industry.

FrontPage 2002 Extensions

Microsoft FrontPage helps you easily create and manage professional-quality websites without programming. Both new users and web development professionals will enjoy the ease in building and maintaining high-quality web sites in very little time.

PHP Version 5

PHP is a very popular scripting language used to develop dynamic web-sites and web-based applications. All of our servers run PHP 5 and have Zend Optimizer and Ioncube extensions installed.

CGI-BIN

Common Gateway Interface is a useful tool that allows you to create some really useful scripts to help make your web site more interactive. Our hosting accounts come with a full CGI-BIN where you can put any scripts that you want to run.

UNLIMITED MySQL v5.1 Databases

MySQL is one of the most popular open source SQL database and is a very useful tool when designing web sites. It can be used for a number of different purposes like holding information to be used in your web sites, or examples the products on an e-commerce site. Every account

comes with unlimited MySQL databases that be configured to your personal specification, so you can have multiple logins and specify user privileges etc...

Script Library

Our hosting accounts come with access to our script library to make setting up a web site even easier. With just a few clicks you can install some of the most powerful web applications with no technical knowledge needed including:

- WordPress
- Joomla
- phpBB
- osCommerce
- MediaWiki
- phpCOIN
- Nucleus
- Form-To-Mail
- Web-Counter

phpMyAdmin

phpMyAdmin is a very easy to use and powerful MySQL admin program that allows you through a web interface do the following:

- Create, copy, drop and alter tables
- Delete, edit and add fields
- Execute any SQL-statement, even batch-queries
- Manage keys on fields
- Load text files into tables
- Create and read dumps of tables
- Export data to CSV values

It is included with all our accounts on the control panel to make administering your databases easy and hassle free.

SSI (Server Side Includes)

Server Side Includes enable the addition of dynamic elements to your HTML web pages. Automatically insert dates, file information and other HTML documents.
